- As a part of policy of continuous improvement, SHARP reserves the right to make design and specification changes for product improvement without prior notice. The performance specification figures indicated are nominal values of production units. There may be some deviations from these values in individual units.

NOTE:

The LC-26BV6E and LC-32BV6E models are the same that LC-26GA6E and LC-32GA6E except the mechanical parts (See page 150 and 152).

IMPORTANT SERVICE SAFETY PRECAUTION

Service work should be performed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:

WARNING

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC power before servicing.

CAUTION: FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE F701 (5A, 250V), F702 (5A, 250V), F703 (2A, 250V), F704 (2A, 250V), F705 (1A).

BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

Before returning the receiver to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
2. Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
3. To be sure that no shock hazard exists, check for leakage current in the following manner.
 - Plug the AC cord directly into a 220~240 volt AC outlet. (Do not use an isolation transformer for this test).
 - Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a 0.15µF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.
 - A true RMS reading multimeter should be used for this test, especially where the equipment uses a switch mode power supply which may result in very non-sinusoidal leakage current.
 - Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)

Any reading of 0.75V peak (this corresponds to 0.5 mA. peak AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.

SAFETY NOTICE

Many electrical and mechanical parts in LCD television have special safety-related characteristics.

These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by "⚠" and shaded areas in the **Replacement Parts Lists and Schematic Diagrams**.

For continued protection, replacement parts must be identical to those used in the original circuit.

The use of a substitute replacement parts which do not have the same safety characteristics as the factory recommended replacement parts shown in this service manual, may create shock, fire or other hazards.

PRECAUTIONS FOR USING LEAD-FREE SOLDER

1 Employing lead-free solder

"ALL PWB" of this model employs lead-free solder. The LF symbol indicates lead-free solder, and is attached on the PWBs and service manuals. The alphabetical character following LF shows the type of lead-free solder.

Example:

Indicates lead-free solder of tin, silver and copper.

2 Using lead-free wire solder

When fixing the PWB soldered with the lead-free solder, apply lead-free wire solder. Repairing with conventional lead wire solder may cause damage or accident due to cracks.

As the melting point of lead-free solder (Sn-Ag-Cu) is higher than the lead wire solder by 40°C, we recommend you to use a dedicated soldering bit, if you are not familiar with how to obtain lead-free wire solder or soldering bit, contact our service station or service branch in your area.

3 Soldering

As the melting point of lead-free solder (Sn-Ag-Cu) is about 220°C which is higher than the conventional lead solder by 40°C, and as it has poor solder wettability, you may be apt to keep the soldering bit in contact with the PWB for extended period of time. However, Since the land may be peeled off or the maximum heat-resistance temperature of parts may be exceeded, remove the bit from the PWB as soon as you confirm the steady soldering condition.

Lead-free solder contains more tin, and the end of the soldering bit may be easily corroded. Make sure to turn on and off the power of the bit as required.

If a different type of solder stays on the tip of the soldering bit, it is alloyed with lead-free solder. Clean the bit after every use of it.

When the tip of the soldering bit is blackened during use, file it with steel wool or fine sandpaper.

Be careful when replacing parts with polarity indication on the PWB silk.

Lead-free wire solder for servicing.

SOFTWARE UPDATING

How to update VCTi Software

Hardware requirements

To update VCT it is needed:

1. A converter from Parallel port to DB9 supplied by Micronas, a male DB9 to female DB9 wire and the updating tool (Part Code: CKIT-0002WJV0).
2. Make the connections as indicated below.
 - 2.1. Connect Parallel cable from the updating tool to the PC.
 - 2.2. Connect the long cable from the updating tool to the P2005 connector (LCD Controller PWB).

Software requirements

A complete Visual I2C (VI2C) installation consists of 4 software components:

1. Visual I2C main program ('visuali2c.exe' and several DLL files)
2. Several DALs: These are IC specific low-level access drivers for the I2C bus.
3. A Windows port driver (LPT or USB). There are three versions for Win9x and WinNT/2000/XP.
4. One or more applications ('*.vi2c'). They're representing the interface to the user.

Software preparation and update

Access to folder:

-D:\SOFTWARE UPDATE GA5\Installation order VCTi\1
-Install Visual I2C (SETUP_VISUAL_I2C_V3_1_7C.EXE)

It's strongly recommended to accept the suggested default folder.

Access to folder:

- D:\SOFTWARE UPDATE GA5\Installation order VCTi\2
- Install LPT driver SETUP_LPTDRVDEV_V0202_XP_20.EXE
- Use for Windows 95/98: Setup_LptDrv_v0104_9x.exe
- Use for Windows 2000/XP: Setup_LptDrv_v0202_XP_20.exe
- Use for Windows NT: Setup_LptDrv_v0104_NT.exe

After installing VI2C, the new generated file structure should look like this:

—> Micronas

- |—> LptDrv (in case of parallel port driver installed!)
- |—> Visual I2C
 - |—> dal
 - |—> doc
 - |—> Port_Driver

-Check installation of LPT driver:

C:\Program Files\Micronas\LptDrv\LptDrvTest.exe

If the LPT Driver is OK, the next picture shows:

```
LptDrvTest
MICRONAS LPTDRU Test <Syntax: LptDrvTest [-pn]  <n=port num. to test>
=====
This test will check LPT number      : 1
Number of LPT Ports found          : 1
=====
LPTDRU version <LptDrvTest>       : 2.2.0
LPTDRU version running <sys/vxd>  : 2.2.0
LPTDRU version running <dll>       : 2.2.0
=====
LptDrv checks access to Port...    : OK!
LptDrv reads status port lines...  : 0x01h
=> LPT Driver Test OK!
--- Wait for keystroke ---
```

If this test is not OK, check in your BIOS: Parallel Port Mode = EPP

Access to folder:

- D:\SOFTWARE UPDATE GA5\Installation order VCTi\VCT49xyi
- Copy all the content to the folder C:\Program Files\Micronas\Visual I2C and after selecting all files and directories and change the «Read only» property. (When you copy from CD, the files are read only protected)

Check your installation:

- When you finish this process the Visual I2C is ready for Win2000 and XP
- LptDriver V.2.2.0 and VctiDown.exe V 1.3 are installed.

-If you have Win98 is necessary change version VctiDown.exe.

- Extract C:\Program Files\Micronas\Visual I2C\VCT49xyi\download\VctiDown_v1-2.zip in the same folder.
- Check LptDriver V1.4.0 and VctiDown.exe V1.2 are installed (Win98).

How to use the application

- To start VCTi software updater program, you can create direct access to:
C:\Program Files\Micronas\Visual I2C\VCT49xyi\vcth_tvt_16bit.vi2c
- Run direct access «vcth_tvt_16bit.vi2c».

-Press OK and Error disappear. Now the program is available for use.

- Double click the file name in the **Load Bin** field and select the software version file.
- The first time that you do this process, confirm that the field address is from 0x800000 to 0xFFFF.

- Enter the TV in Service Mode.
- Select OTHERS / FLASH UPGRADE.
- Change from OFF to ON.
- Switch OFF and Switch ON the TV.
 - Now the TV does not have watchdog and it is possible to make bootloader.
- Select Bootloader option. Set AutoRead to ON and wait until 22 appears in Bootlader Version field.
- Click on the button Erase 16bit Flash. The bootloader version will be zero during few seconds. When the version field marks again 22 set Auto Read OFF.
- Click on the button LOAD BIN -> FLASH and the updating will start up.
- The updating will end before the progress bar reaches the end; if there is no error message the updating has been good.

Sometime the progress bar is very quick or error message appears, then is necessary increase the delay until the problem disappear:

-Select LPT Preference.

- Increase Delay: normally 2 or 3 are the best choice.

If there are further problems to enter the bootloader mode you can use the hardware method:

- Power off VCTi or hold RESET line to GND.
- Pull down SCL line to GND.
- Power up VCTi or release RESET line.
- Release SCL pull down after minimum of 1 second.
- Check if VCTi is in bootloader mode with a AutoRead.

TROUBLESHOOTING TABLE

Previously to start following the behing troubleshooting tables, consider the below situations.

Problem	Possible Solution
• No power.	<ul style="list-style-type: none"> • Is the AC cord disconnected? • Has the power been turned on? • Make sure the  (Power) switch of the TV is set to on.
• Unit cannot be operated.	<ul style="list-style-type: none"> • External influences such as lightning, static electricity, etc., may cause improper operation. In this case, operate the unit after first turning the power off, or unplugging the AC cord and re-plugging it in after 1 or 2 minutes.
• Remote control unit does not operate.	<ul style="list-style-type: none"> • Are batteries inserted with polarity (+, -) aligned? • Are batteries worn out? (Replace with new batteries.) • Are you using it under strong or fluorescent lighting? • Is a fluorescent light illuminated to remote control sensor?
• Strange colour, light colour, or dark, or colour misalignment.	<ul style="list-style-type: none"> • Adjust the picture levels. • Is the room too bright? The picture may look dark in a room that is too bright. • Check the system setting. • Check the input type setting.
• Power is suddenly turned off.	<ul style="list-style-type: none"> • The unit's internal temperature has increased. • Remove any objects blocking vent or clean. • Check the power control setting.
• No picture.	<ul style="list-style-type: none"> • Is connection to other components correct? • Has input type setup been done correctly after connection? • Is the correct input selected? • Is a non-compatible signal being input? • Is picture adjustment correct? • Is the antenna connected properly?
• No sound.	<ul style="list-style-type: none"> • Is the volume too low? • Make sure that headphones are not connected. • Make sure the sound is not set to Mute.

Cautions regarding use in high and low temperature environments

- When the unit is used in a low temperature space (e.g. room, office), the picture may leave trails or appear slightly delayed. This is not a malfunction, and the unit will recover when the temperature returns to normal.
- Do not leave the unit in a hot or cold location. Also, do not leave the unit in a location exposed to direct sunlight or near a heater, as this may cause the cabinet to deform and the LCD panel to malfunction.
Storage temperature: -20°C to +60°C (-4°F to +140°F).

Pin	Function	Description
2, 3	DCAP2, DCAP1	Charge pump switching pins. DCAP1 (pin 3) is a free running 300kHz square wave between VDDA and DGND (12Vpp nominal). DCAP2 (pin 2) is level shifted 10 volts above DCAP1 (pin 3) with the same amplitude (12Vpp nominal), frequency, and phase as DCAP1.
4, 9	V5D, V5A	Digital 5VDC, Analog 5VDC
5, 8, 17	AGND1, AGND2, AGND3	Analog Ground
6	REF	Internal reference voltage; approximately 1.0 VDC.

10, 14	OAOOUT1, OAOOUT2	Input stage output pins.
11, 15	INV1, INV2	Single-ended inputs. Inputs are a "virtual" ground of an inverting opamp with approximately 2.4VDC bias.
12	MUTE	When set to logic high, both amplifiers are muted and in idle mode. When low (grounded), both amplifiers are fully operational. If left floating, the device stays in the mute mode. This pin should be tied to GND if not used.
16	BIASCAP	Input stage bias voltage (approximately 2.4VDC).
18	SLEEP	When set to logic high, device goes into low power mode. If not used, this pin should be grounded
19	FAULT	A logic high output indicates thermal overload, or an output is shorted to ground, or another output.
20, 35	PGND2, PGND1	Power Grounds (high current)
22	DGND	Digital Ground. Connect to AGND locally (near the TA2024).
24, 27; 31, 28	OUTP2 & OUTM2; OUTP1 & OUTM1	Bridged output pairs

Signal Descriptions for the Analog Interface Pins

Name	Pin	Type	Function
RAIN	37	AI	Red/Green/Blue Analog Inputs. These pins receive the Red, Green and Blue, or YPbPr/YCbCr/YUV analog signals from the analog video source.
GAIN	43	AI	For proper operation of the clamp feature, these inputs must be AC-coupled.
BAIN	50	AI	
SOGIN	44	AI	Analog Sync-On-Green or Sync-On-Luma input. Allows recovery of the HSYNC signal when this pin is AC-coupling to the Green (Red or Blue) analog signal source. If not used, this pin should be left unconnected.
FILT	23	AI	External PLL Loop Filter. When using the on-chip PLL, this pin must be connected to an external filter network.
HSYNC	65	DIS	Horizontal Synchronization Input. This digital input signal controls the horizontal scan frequency by synchronizing the start of the horizontal scan. The logic polarity of this signal is controlled by the HSPOL bit.
VSYNC	64	DIS	Vertical Synchronization Input. This digital signal controls the vertical scan frequency.

Display/Even Port Pin Descriptions

Name	Pin(s)	Type	Function
DCLK	106	OSR	DPort Pixel Clock. Output clock for the display port pixel data. DCLK is enabled by the DCLKEN bit and can be inverted by the DCPOL bit. DCLK can be set to run at $\frac{1}{2}$ pixel rate, for dual pixel output mode, by setting the DCK2EN bit. The internal DCLK clock domain can be disabled by the DCLKOFF bit to reduce power consumption.
DCLKNEG	107	OSR	DPort Pixel Clock.
DVS	101	OS	DPort Vertical Sync. DVS can be either active-high or active-low depending on the VSPOL bit. Width and timing is controlled by the VPLSE and VDLY registers.

SCHEMATIC DIAGRAMS

Description:

VOLTAGE MEASUREMENT CONDITION:

1. The voltages at test points are measured on exclusive AC adaptor and the stable supply voltage of AC 230V. Signals are fed by a color bar signal generator for servicing purpose and the above voltages are measured with a 20k ohm/V tester.

INDICATION OF RESISTOR & CAPACITOR:

RESISTOR

1. The unit of resistance “ Ω ” is omitted. ($K=k\Omega=1000 \Omega$, $M=M\Omega$).
